DETAILED ACTION

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In the claims:

In claim 16, line 2, "0,1 mm" is replaced with --0.1 mm--.

Election/Restrictions

Claims 8-20 are directed to an allowable product. Pursuant to the procedures set forth in MPEP § 821.04(B), claim 1-7, directed to the process of making or using an allowable product, previously withdrawn from consideration as a result of a restriction requirement, are hereby rejoined and fully examined for patentability under 37 CFR 1.104.

Because all claims previously withdrawn from consideration under 37 CFR 1.142 have been rejoined, **the restriction requirement as set forth in the Office action mailed on 10/10/06 is hereby withdrawn.** In view of the withdrawal of the restriction requirement as to the rejoined inventions, applicant(s) are advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Once the restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Allowable Subject Matter

Claims 1-20 are allowed.

The following is an examiner's statement of reasons for allowance:

The closest prior art of record, Yorifuji et al. (US 6,337,539) teaches a discharge lamp having a discharge tube and a tubular extension having a smaller diameter than the diameter of the discharge tube located at an end of the discharge tube and having a free end of the tubular extension extending away from the discharge tube end. Yorifuji et al. fail to disclose the tubular extension having a reduced thickness portion, which is a "membrane." The term membrane requires the reduced thickness portion to be so thin that it is pliable or flexible.

Prior art of record fails to disclose or fairly suggest:

- A method of manufacturing a cold spot region on a discharge tube of a lamp that includes the step of forming a tubular extension at one end of the discharge tube and forming a reduced thickness portion on the tubular extension, wherein the reduced thickness portion is a membrane, in combination with the remaining claimed limitations as called for in claim 1 (claims 2-7 are allowable for the same reasons since they depend on claim 1).
- A discharge tube having a tubular extension at an end of the discharge tube, wherein the tubular extension includes a reduced thickness portion, wherein the reduced thickness portion is a membrane, in combination with the remaining claimed limitations as called for in claims 8 and 20 (claims 9-19 are allowable for the same reasons since they depend on claim 8).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
